Many commercial ship owners place the Stella® Platform Management Systems high on the Makers List, to benefit from solutions based on more than 50 years of experience, a worldwide service network and more than 10000 references.

The latest generation of **Stella® SCSS** provides naval clients with the same advantages, while catering for all the unique requirements particular to naval applications.

The **Stella® SCSS** – Ship Control and Supervision System – is a full-blown, entirely integrated IPMS system comprising all the essential features for the efficient and safe operation of today's naval ships.

The **Stella® SCSS** uses an open, industry standard system architecture and is employing modular, standardized software for cost efficient maintenance and through-life support.

The **Stella® SCSS** uses the Alpha4 processor, a purpose-built, navy-grade version of COTS hardware, to achieve an optimum balance between ruggedness and cost, support and maintenance.

Key features of the **Stella® SCSS IPMS** are:

- Full platform control including FPP and CPP propulsion
- Platform-wide monitoring and integrated alarm handling
- Damage protection and damage control (gas tight closure, fire dampers, water ingress monitoring etc.)
- Full integration with onboard training simulators
- An extensive range of industry-standard interfaces to maintenance systems, damage/fire control systems and navigation systems.
