Bruhn NewTech exists to increase the number of people protected from airborne terror. We were born in 1991 from an innovative idea by young software engineers seeing a commercial opportunity for leveraging the accelerating possibilities of technology to defuse the rising threat of terrorism.

From the belief that the value of technology depends on its significance for humanity, we started developing software that enables first-responders to react rapidly and save lives when life-threatening attacks and incidents occur. Hazardous chemicals, radioactive materials, biological agents and nuclear threats no longer exclusively belong to the military battlefields. Today, we supply civil authorities and defense forces in more than 30 countries worldwide with proven and life-saving information management. Our CBRNe information and sensor management software solutions are in operational use by over 80% of NATO countries including navy vessels across the globe.
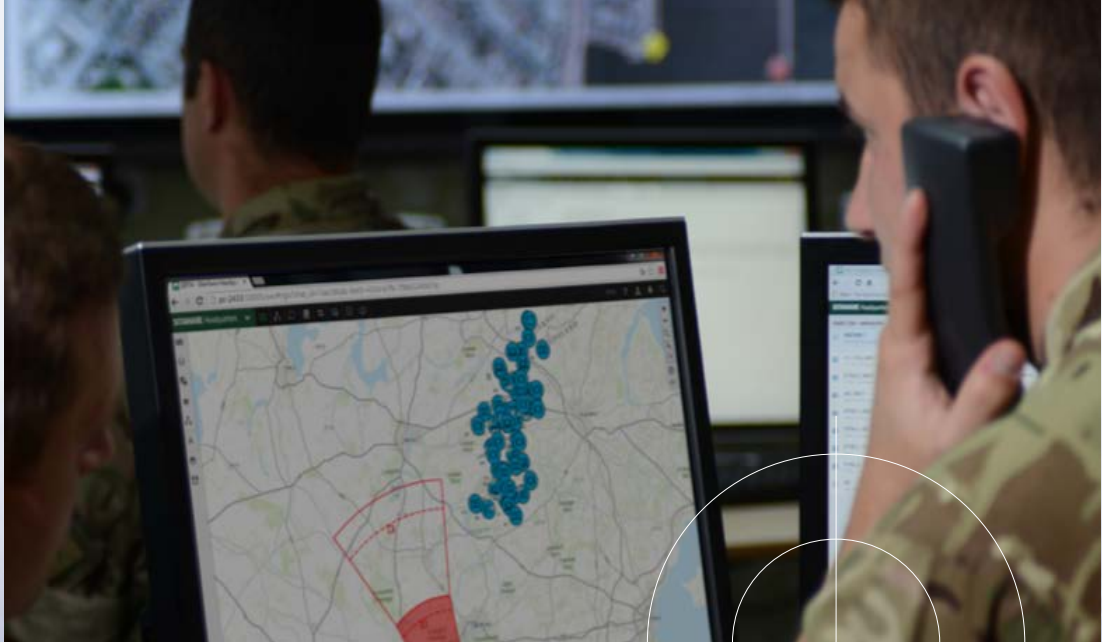

With more than 25 years of specialization, we have become a world-leading provider of software that efficiently detects threats, significantly reduces response time and accurately informs reaction plans.

We aim to provide the needed certainty in times of emergency by supporting critical decision making with real-time data. We are founded from the belief that all lives have equal value and that every human being is entitled to a meaningful life. As such, we live to protect the safety of societies – regardless of geography. And we live to guard the freedom of individuals – regardless of ethnicity.

From conflict zones in the Middle East to sports venues and train-stations in the Western world, we will continuously work to increase the number of people protected from airborne threats.

One human life at a time.

BRUHN NEWTECH
LIFE SAVING SOFTWARE SOLUTIONS

CBRN Information Management Software

Provides a specialized range of CBRNe lifesaving solutions for Defence and First Response operations.

Bruhn NewTech's core business is the development of CBRN defence, CBRNe Information Management software and Sensor Connectivity Management software.

We have a team of specialist personnel including Software Developers, Defence and Public Safety Practitioners and CBRNe Subject Matter Experts. Based on more than 25 years of CBRN domain experience, Bruhn NewTech's specialist skills are focused on the advancement and delivery of life saving CBRNe Incident Management Decision Support Tools to address the challenges of both conventional and asymmetric CBRNe threats and hazards.

Bruhn NewTech provide a specialized range of CBRNe solutions mainly for defence operations. The core elements being; CBRNe Information Management software applications that can incorporate the enhancement of Sensor and Instrument integration and additional CBRN Intelligence functions.

These solutions are available as Commercial-Off-The-Shelf or Modified-Off-The-Shelf to meet individual customer requirement. We provide solutions, which can be tailored to your needs both in mobile configurations, such as protections of concerts or sporting events, and in fixed configurations for infrastructure protection, airports, recce vehicles, navy vessels etc.

With constant R&D, we are always looking at bridging the gaps that users find or that we identify within any hazard prediction or Warning and Reporting chain. Time can be critical in dealing with any CBRNe incident. Life can be, or might be, put at risk if decisions are not quickly and accurately analysed with the information to hand.

The first step in protecting yourself from the invisible dangers of a chemical attack is to know that it is there.
