Systematic delivers world-leading Command-and-Control C2, military messaging, and electronic warfare solutions. In service with more than 40 countries, our reliable, user-friendly software is operationally proven and has been developed as commercial-off-the-shelf products with open architectures that ensure interoperability and enable customers to tailor solutions to their own needs.

Systematic is a privately owned company that was started in 1985. In addition to defence, we serve the healthcare, libraries and learning, and intelligence

and national security sectors, among others.

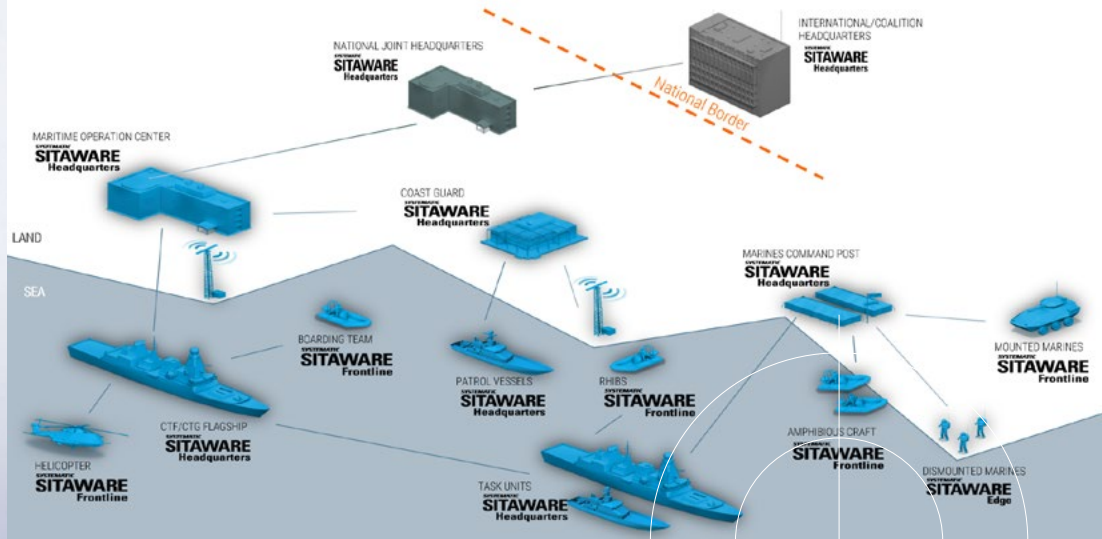

Our core C2 solutions – SitaWare Headquarters, SitaWare Frontline, and SitaWare Edge – function across all echelons of the battlespace, installed in fixed infrastructure, mounted applications, and with dismounts.

Offering comprehensive situational awareness and a broad range of tools, the SitaWare suite is in service with conventional and special forces personnel and continues to support kinetic, peacekeeping,

and disaster relief missions, among others.

Systematic's IRIS software is the de facto NATO standard for military messaging and provides tools for the creation, display, and exchange of structured information, making national information systems interoperable with joint and coalition partners.

In the electronic warfare domain, Systematic delivers world-class training and consultancy solutions, as well information management products, such as the EWare system.

Maritime Command and Control

SitaWare for the Maritime Commander

Systematic A/S

Systematic is building on the success of its operationally proven SitaWare suite of command-and-control software to enhance the capabilities of the naval commander.

The maritime-focused tools provide a comprehensive Recognised Maritime Picture (RMP) and a range of functionalities that greatly enhance C2 for naval operations.

Among the advanced C2 capabilities being brought to the maritime domain is the ability to introduce numerous information

overlays in an easy to view and interrogate format, ranging from meteorological data to Air Tasking Orders. Of particular note is the Plans & Orders tool, which assists the commander in tactical analysis and planning maritime operations.

Systematic is also enabling operations in satellite communications-denied environments, with its technology supporting low-bandwidth communication over HF radio.

The company is continuing its open-architecture approach,

enabling a wide variety of information sources to be drawn upon and ensuring interoperability with partners.

The maritime domain is a natural progression for SitaWare and indeed, the software has already found utility with the Irish Naval Service and Royal Danish Navy.
