As a key partner of navies and coastguards worldwide, Thales offers cutting edge technology: from the world's largest sensor above and underwater portfolio to leading C4ISR solutions, from prime contracting to lead system integration, from warship modernisation programmes to innovative operational life cycle support & services for the broadest range of ship classes.

ABOVE WATER

The above water systems portfolio is the largest world-wide. It consists of an impressive range of surveillance and fire control sensors as well as multi-function systems. Thales' renowned Tactics combat management system is the best-sold CMS in the world

and is scalable for every ship and mission. With all radars, electro-optical sensors and antennae integrated in one housing, the Thales' Integrated Mast offers increased performance, reduced lifecycle costs, enables reduced shipbuilding time and supports reduced manning concepts.

For the two Absalon class multirole ships, the Royal Danish Navy selected Thales to develop and build the SMART-S Mk2 surveillance radar. This radar is optimized to provide medium-to-long range situational awareness and target designation in complex environments such as the littorals.

For the Iver Huitfeldt class Thales supplied its well-known and proven Anti Air Warfare. It consists of the APAR multi-function radar and the SMART-L

long range surveillance radar. The AAW suite is proven and suitable for Ballistic Missile Defence upgrade offering cost efficient BMD.

UNDER WATER

With over 40 years of experience in undersea warfare Thales is a world leader in its field, the major exporter of sonar and associated systems for navies and air forces. Thales has for decades supplied and supported the Royal Danish Navy, recognised

as one of the world strongest MCM experts, with state of the art MCM sensors.

The wide range of products and systems for submarines, surface vessels, mine-countermeasures vessels, and aircraft, include hull-mounted, variable depth, towed and dipping sonar systems, sonobuoys and sonobuoy processing systems, torpedo homing heads and antennas, sonar support systems.
