Founded more than 80 years ago, Rohde & Schwarz is one of the world's leading manufacturers of information and communications technology products for professional users. Initially focusing on RF engineering and RF applications in test and measurement, radiocommunications and broadcasting, the company has continually expanded its fields of activity over the past decades.

Rohde & Schwarz Denmark was founded in 1990 and our goal from the very start was to use and strengthen our position at the Danish market which we among other things do with offices in both Glostrup and Aalborg. In addition we represent the Baltic market as well with local sales office in Tallinn, Riga and Vilnius.

Rohde & Schwarz offers high-performance, fully integrated and modular communications solutions for all branches of the armed forces. The portfolio ranges from portable devices for dismounted soldiers and stationary applications to systems for operation in airborne platforms, land vehicles and ships.

Software defined radios from Rohde & Schwarz feature a comprehensive suite of legacy waveforms. In addition, Rohde & Schwarz has developed its own family of networked, wideband waveforms for a variety of communications scenarios. The philosophy of strengthening our customers' digital sovereignty is manifested in an open waveform development environ-

ment. This environment is what makes it possible to develop a national, autonomous waveform, making customers independent of manufacturers.

Rohde & Schwarz provides interoperable radio systems for use on land, at sea and in the air. The customized communications solutions are based on the philosophy of strengthening our customers' sovereignty while making them technologically independent of manufacturers.

Furthermore Rohde & Schwarz provides market leading test and measurement solutions for radar, electronic warfare, satellite, aviation, guidance, communications and radio monitoring systems.

ROHDE & SCHWARZ

Secure operable communications

Rohde & Schwarz offers high-performance, fully integrated and modular communications solutions for all branches of the armed forces

Naval communications

Rohde & Schwarz has provided more than 40 navies with the latest technology - from system design to on-board integration.

Airborne communications

Flying units of the air force, army and navy have come to depend on radio solutions from Rohde & Schwarz to support their missions.

Tactical communications

Software defined radio technology and high data rate waveforms for gaining information superiority and situational awareness.

Air defence communications

Air defence requirements are placed on the safety and protection, robustness and interoperability of the ATC systems in use.

Aerospace & Defense T&M

With excellence in test and measurement and decades of industry experience, we provide the means for our customers to push the limits of technological progress in aerospace, defense and space.
