The company was founded in 1987 following the closing of Aalborg Shipyard. The primary business is electrical & automation consultancy and software solutions within the maritime segment.

Through the years Logimatic has evolved into a professional IT company with focus on logistics and niche related software solutions. The company operates within other areas as well, and today the workforce counts app. 50 employees.

The main business area, however, remains related to the maritime industry.

Our main activities are as follows:

- Integrated Platform Management System for naval vessels (IPMS)
- Consulting Services in the field of Electrical- and Automation Design
- Fleet Maintenance Procurement System
- Customer specific IT solutions

A large number of our customers are situated outside Denmark. Nevertheless, one of our most loyal customers is the Royal Danish Navy, and through close cooperation we have achieved a valuable know-how within the development, design, commissioning, programming and support of advanced control and monitoring systems for different naval ship types. Some of our references are the Integrated Platform Management System for the biggest vessels in the Royal Danish Navy, the Flexible Support Vessels,

delivered in 2005 and the Patrol Vessels, which will be delivered from 2010. The Danish Defence Acquisition and Logistics Organisations utilisation of high technology in naval ships has given us a valuable spin-off to other naval shipyards and ship-owners.

Advanced techniques for design of integrated systems are applied for maximum reliability and safety.

The LOGIHOLD V5 represents the next generation of our well-proven IT based fleet maintenance and procurement system.

LOGIHOLD V5 is the daily tool in the modern shipping industry to optimize the data flow and consequently manage all maintenance and procurement related activities of the entire fleet.

The system is used by more than 50 % of the Danish ship owners and shipping companies. It has, however, been implemented at several shipping companies globally.

This leads us to believe that we bring value to our costumers due to our deep application knowledge and years of experience within the maritime industry.
