Experienced military supplier

For over 40 years DC-Supply has consistently honed our skills, always learning, evolving from experience - developing the expertise needed for supplying custom-built containers to the military market. All of our solutions come with subsequent follow-up and service, with our employees ready to attend to needs and demands regardless of skills required. We follow through, ensuring a well-executed project, delivered on time – every time.

A few examples of basic container solutions supplied for

military use by DC-Supply are the storage of weapons, ammunition, minesweeping equipment and spare parts. Other, more sophisticated examples would be containers built for Drone launch and control container.

Specialised radiation-free working environment that is shielded and protected against monitoring, radio signals, radiation, hacking of IT equipment, radar or other communications, all build in to a container systems - and we feel confident that the experience gleaned from successfully completing a wide

variety of jobs over the years, have given us the knowledge and know-how to become a class-leading global partner, delivering various projects and solutions for both military and naval use.

DC-Supply developed and produced specialised MCM diver and control containers for The Royal Danish Navy.

These highly sophisticated MCM containers run complete with a silenced A/C unit, a comfortable ergonomic interior design, that is fitted to the highest standard, enabling Navy personnel to focus all resources on the challenging task of securing and clearing the waters. This fully containerised, modular MCM solution offers new efficient ways of deploying MCM quickly and effectively to anywhere in the world.

Radar information containers (RIC)

The radar information container from DC-Supply can be used as an advanced mobile unit - with optimised protection against outside surveillance, unwanted radio signals, radiation, hacking of IT equipment, radar or other communications. Additionally, this container-based solution also offers a radiation-free working environment, as well as being an easily transported, highly mobile solution, able to be transported on trucks, trains, ships or onboard aircraft. On request the container can be delivered with ballistic protection up to mortar grenade level.

Combat information containers (CIC)

Over the years, we have also delivered several specialised combat information containers, designed for various scenarios. These combat information containers are custom-built, developed, designed and optimized solutions, specifically for use in military operations and on missions. They can be used to an advantage as advanced forward mobile units, and can also if needed, be delivered with ballistic protection paneling offering protection up to mortar grenade level.
